

Group 42 Report - 28/02/20 - 13/03/20

Adnan Ahmad, Rajesh Goyal

Status Of The Project

This has been the busiest period of development. Firstly, the VM was accidentally deleted by Adnan and as a result a new MySQL database had to be constructed. We decided to take this opportunity to redesign our schema so that it suited our client more, as it was very specific to UCL's needs. We also got adaptive cards fully integrated, so that the user could click on them and see info on project description and industry partners.

Updates With Client

The key updates have been:

- Final schema developed that is more suited to the RCGP and Dr Mistry

List of completed tasks

- Adaptive cards successfully linked
- Cards are clickable to view more information on projects

Next Steps

- Add in contract, NDA and academic information to each project
- Change admin panel to GUI interface

Progress By Team Member

- Adnan redesigned the schema and extended the chatbot to include the adaptive cards
- Rajesh continued work on admin panel and working out bugs
