

# Group 42 Report - 07/02/20 - 28/02/20

Adnan Ahmad, Rajesh Goyal

## Status Of The Project

Development during these two weeks have been slow because of reading week and commitment to other modules. However, we have been able to design all the adaptive cards needed to show our project information and added Dean's schema to the database, which Rajesh is close to integrating with his console app.

## Updates With Client

The key updates have been:

- Received schema from Dean that expands the amount of data we can store about a project. Although we cannot parse this info from forms, he has instructed us to produce a way of entering it manually and linking it to the IXN forms in a separate table.

## List of completed tasks

- Designed all adaptive cards
- Added to database with new schema

## Next Steps

- Integrate chatbot with the new schema given by Dean
- Implement the cards designed so you can actually access them in the chatbot

## Progress By Team Member

- Adnan designed the adaptive cards
- Rajesh continued work with the admin panel
